

Instruções para execução do projeto

Requisitos

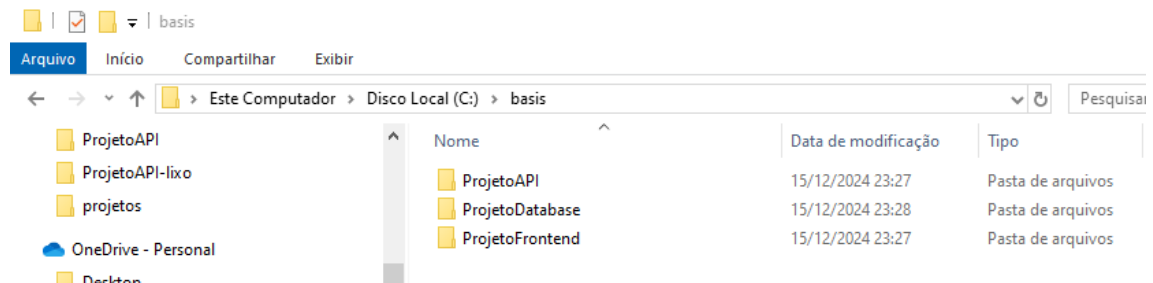

- Dotnet 6
- Node 20.11.1
- Docker 27.3.1

Repositórios

- <https://github.com/igorguilhermevettorello/ProjetoAPI>
- <https://github.com/igorguilhermevettorello/ProjetoFrontend>
- <https://github.com/igorguilhermevettorello/ProjetoDatabase>

Rotina

1. Baixar os projetos

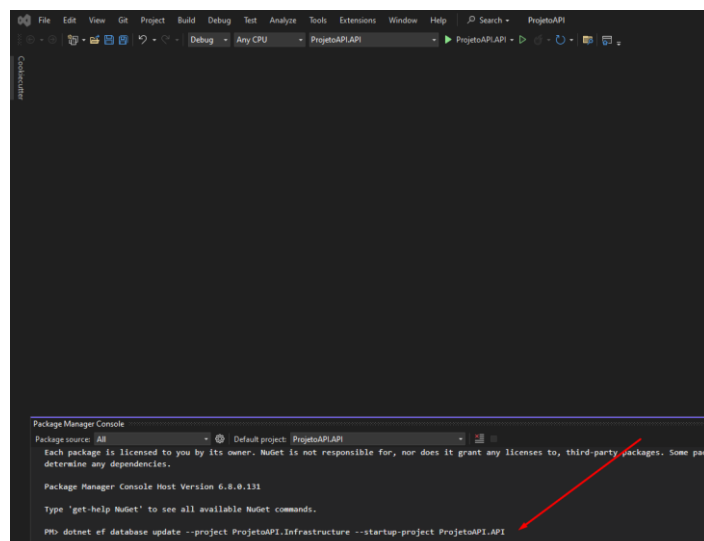

2. Inicializar o projeto do banco de dados com o comando:

`docker-compose up -d`

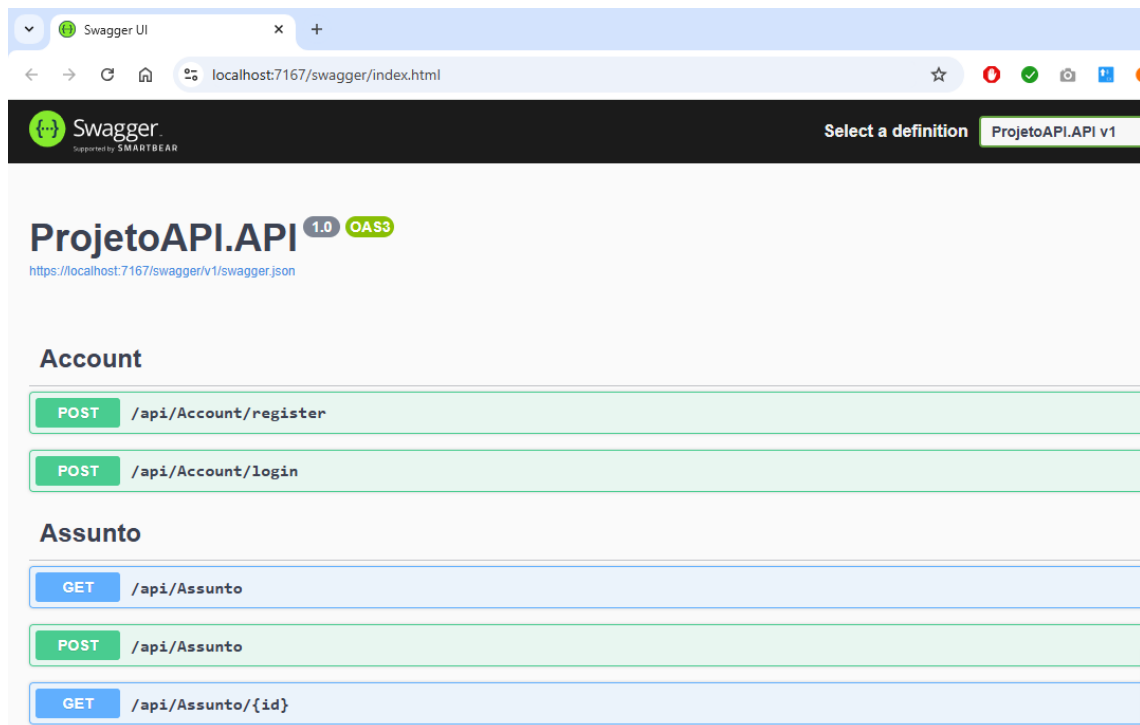

```
PS C:\basis\ProjetoDatabase> docker-compose up -d
[+] Running 1/1
  Container sqlserver Started
PS C:\basis\ProjetoDatabase>
```

3. Abri o projeto backend com VS e executar as migrations com o comando:

`dotnet ef database update --project ProjetoAPI.Infrastructure --startup-project ProjetoAPI.API`

4. Executar o projeto

5. Abri o projeto frontend e executar os comandos.

npm i

npx ng serve
